/note="The library Gm-r1070 is a sequence-driven, reracked set of 9,216 clones selected from cDNA libraries from various tissues and stages of development of soybean that represent 2,639 sequences from immature cotyledons, 1,770 from immature seed coats, 3,938 from flowers, and 869 from immature seed coats, 3,938 from flowers, and 869 from woung pods. The 5' ESTS of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were reracked form library Gm-r1070. The cDNA clones of the reracked form library were then sequenced at the 3' end. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics, University of Illinois, http://www.genomesystems.com, and 3' sequencing by the Keck Center for Comparative and Functional Genomics, University of Illinois, http://www.life.uiuc.edu/biotech/keck.html. Note: The corresponding 5' EST from each clone in the Gm-r1070 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the month.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

     Submitted (01-APR-1999) Lita Annenberg Hazen Genome Sequencing Center, Cold Spring Harbor Laboratory, 1 Bungtown Road, Cold Spr Harbor, NY 11724

Arabidopsis thaliana BAC T7B11 from chromosome IV near 9.5 cM
The T7 end of T7B11 is oriented toward the NOR and overlaps with T15B16, GenBank accession number AF104919. The SP6 end of T7B11 oriented toward the centromere and overlaps with T10M13, GenBank accession number AF001308. There are no discrepancies found in these independently finished overlaps. The region from position 110064 to 110253 exists as single stranded and single chemistry. Please see the feature below for details.

Arabidopsis thaliana (thale cress)
Arabidopsis thaliana
Bukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;
Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
rosids; eurosids II; Brassicales; Brassicaceae; Arabidopsis.

E 1 (bases 1 to 549)
S chmid,K.J., Soerensen,T.R., Stracke,R., Torjek,O., Altmann,T.,
Mitchell-Olds,T. and Weisshaar,B.
Large-scale identification and analysis of genome-wide
single-nucleotide polymorphisms for mapping in Arabidopsis thaliana
Genome Res. 13 (6), 1250-1257 (2003)
B 22683290
D 12799357

/clone six weeks old total plants grown under long-day conditions in soil, whole adult plants were treated for 24 hours with different stresses, (1) at 4M-0 C in the dark, (2), at 37 Grad C in the dark, (3) lying in the lab after removing from soil, (4) in the greenhouse after wounding leaves with a foreceps, (5) in the lab watering with a 150 mM NaCl solution, (6) at 26 Grad C in the light/UV; equal quantities of stressed plant material were pooled; library was made at the Max-Planck-Institute for Plant Breeding Research, Cologne, Germany; cloning sites Sall-Not!,

An Arabidopsis full-length cDNA library was constructed essentially as reported previously (Seki et al., 1998).cDNA cleaved with BamHI and XhoI was ligated to modified Lambda FLC-1 vector (Carninci et al., submitted for publication) digested with BamHI and SalI. This clone is in a modified pBluescript vector. Please visit our web site (http://www.gsc.riken.go.jp/e/plant/index_e.html) for further details.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    294

/note="Vector: pBluescript SK-; Site 1: EcoRI; Site 2:
Xhol; At the trifoliate stage, M. truncatula plants were
transplanted to phosphate-free sand and grown for a
further 30 days. During this period, they were fertilize
twice weekly with 1/2 Hoaglands solutions containing 20u
potassium phosphate. cDNA was prepared from polyA+
enriched RNA. The cDNA was directionally ligated into the
Unizap XR vector from Stratagene and packaged using
Gigapack III Gold packaging extracts. Plasmids containing
cDNA inserts were excised from the recombinant lambda-Za

xhoI; Immature seeds, collected from pods ranging in age
from 11 to 19 days after pollination, were harvested from
greenhouse-grown plants. Seeds were removed and
separated from pod walls and were immediately frozen in
liquid nitrogen. Seeds throughout the age range were
pooled for mRNA extraction, cDNA was prepared from polyA+
enriched RNA. The cDNA was directionally ligated into
the Unizap XR vector from Stratagene and packaged using
Gigapack III Gold packaging extracts. Plasmids containing
cDNA inserts were excised from the recombinant lambda-Zap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ö
                                                                                                                                                                                                                                                                                        20-JUL-2001
